Math 523 HW 7

Morgan Gribbins

Section 2.5

In Exercises 2 through 6, locate and describe the isolated singularities.

(2) $\frac{z^2}{\sin z}$

This function has an isolated singularity at $z = 0$, and this is a removable singularity, with a value of 0 at this point.

(4) $\pi \cot \pi z$

This function has isolated singularities at $2\pi k, k \in \mathbb{Z}$. These are poles of order 1.

(6) $\frac{e^z - 1}{e^{2z} - 1}$

This function has an isolated singularity at $z = 0$. This is a removable singularity, with a value of $1/2$ at this point.

In Exercises 8 through 12, find the Laurent series for the given function about the indicated point. Also, give the residue of the function at the point.

(8) $\frac{z^2}{z^2 - 1}$, $z_0 = 1$

$$z^2 = 1 + 2(z-1) + (z-1)^2,\ z^2 - 1 = 2(z-1) + (z-1)^2 \implies$$

$$\frac{z^2}{z^2-1} = (1-2(z-1)+(z-1)^2)\frac{1}{2(z-1)+(z-1)^2} = \left(\frac{1}{2(z-1)} - 1 + \frac{1}{2}(z-1)^2\right)\frac{1}{1-(-\frac{1}{2}(z-1)}$$

$$\implies \frac{z^2}{z^2-1} = \frac{1/2}{(z-1)} + 3/4 + \sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{2^{n+2}}(z-1)^n.$$

This function has residue $1/2$ at $z = 1$.

(10) $\frac{z}{(\sin z)^2}$, $z_0 = 0$ (four terms of the Laurent series)

(12) $\frac{1}{e^z-1}$, $z_0 = 0$ (four terms of the Laurent series)

(22) Find the Laurent series about $z_0 = 0$ for the following functions, valid in the indicated regions.

(22a) $e^{1/z}$ in $0 < |z| < \infty$

(22b) $z^4 \sin(1/z)$ in $0 < |z| < \infty$

(22c) $\frac{1}{z-1} - \frac{1}{z+1}$ in $2 < |z| < \infty$
